

**Production equipment and machinery in Oil&Gas processing facilities may be emitting high noise levels resulting in HSE risks for personnel working in the area. Working time limitations and loss of efficiency is a costly result of excessive noise level from the process equipment.**

A common practice is to install noise reducing measures when work and maintenance is performed in noisy environments. The Benarx Sound Reducing Curtains is an effective and flexible solution for reducing noise level in a work area. The modular curtain system is quickly installed and removed, and is suitable for both temporary and permanent installations.

- Weighted sound reduction of up to 24 dB
- Lightweight, flexible and extremely durable silicone fabric
- The fabric is easy to cut - allowing easy modification when needed
- Product thoroughly tested for antistatic properties and non-flammable properties
